

GADGET STORE -
BUY THE BEST ELECTRONICS ONLINE

Presented by
Yadhu Krishna

Introduction

ElectraCart is a simple and modern website for buying electronics online. It is easy to use, fast, and works well on mobile, tablet, and computer.

Main Goals:

- Show different products like headphones, TVs, mobiles, and accessories.
- Provide clear product information with pricing.
- Enable customers to easily filter products to find what they need.
- Provide a simple cart and order process.

Technology Used

- **HTML** – Makes the structure of the website.
- **CSS** – Adds colors, styles, and layout.
- **Bootstrap** – Helps make the design mobile-friendly and quick to build.
- **JavaScript** – Makes the site interactive (filters, cart updates, buttons).

Main Features

01

Product Display – Shows products with name, price, and image.

02

Filters – Customers can filter by price, brand, and type.

03

Shopping Cart – Add products to cart and see total with GST and shipping.

04

Login/Register – Customers can create an account and log in.

05

Responsive Design – Works on all screen sizes.

06

Add dark mode for eye comfort.

Future Ideas

01

Add a chatbot for customer help.

02

Add multi-language support.

03

Show product recommendations.

04

Connect with online payment systems.

Conclusion

We built a clean, fast, and mobile-friendly electronics website using only HTML, CSS, Bootstrap, and JavaScript. It is easy for customers to find, view, and buy products. This project can grow with more features in the future.

THANK YOU!
